

## DMSync for iManage

The easiest way to sync and access your Document, Folder, and Workspace metadata

Professional Services firms leveraging iManage's document management system require a simple and effective way to view Document Profile Information, Workspace and Folder content. Today, there is no way to easily report on the content stored in iManage Cloud without development. With GDSI's DMSync for iManage, the sync can occur on a regular basis to keep the data recent.

### KEY FEATURES

- Automatically synchronizes all document profile metadata from the Cloud to your local SQL Server (e.g., Client, Matter, Doc Num, Description, Author)
- Supports an unlimited number of cloud based iManage Databases
- Access to all Document CUSTOM fields, 1-31
- Access to all Folder and Workspace CUSTOM fields as well
- Track when documents are created and last edited
- Ability to run as a Windows Scheduled Task or a Windows Service
- Develop reports or custom apps around this data instead of writing REST API apps
- Access to folder contents and document locations
- Workspace information, such as Client, Matter, and Folders
- Simple and fast setup, takes minutes
- Support for custom settings and actions using GDSI's development services
- Synchronizes content whenever you wish. Synchronization time ranges based on settings chosen
  - ◆ Within our settings, we can choose to only synchronize Workspace, Folders, or Documents

### PRICING

\$5,000, regardless of the number of databases

Additional setup fees may apply should the firm require a custom setup

### TECHNOLOGY PLATFORM

- Local, on-premises Windows installation
- Installed as a Windows Service or an executable for use within Windows Scheduled Task or some other application
- Requires a local SQL Server 2014–2019
- Logging for problematic synchronizations
